# How Is COVID-19 Detected?

Activity Preparation

## How Is COVID-19 Detected?

### Activity:

Find the right test kit

### Materials:

- Building bricks (before the activity, build a few viruses and their matching test kits like the sample below; label the test kits)

## How Is COVID-19 Detected?

### Steps:

1. Create the test kits and “viruses” using building bricks. Each “virus” should have a matching test kit.
2. Mix them together then match the test kit to the “virus”.
